Navi Mumbai

Title: BookEHealth Healthcare Management System

Introduction

The BookEHealth Healthcare Management System is a web and mobile-based application developed to automate and manage complete healthcare consultation and patient management processes. The system is designed to replace traditional manual healthcare management methods with a secure, fast, and efficient digital platform.

The application manages all major healthcare activities including user registration, appointment booking, online consultation, prescription management, diet plan management, report upload/download, payment integration, and healthcare communication. The system also supports Zoom meeting integration, healthcare tools, chat functionality, and real-time appointment tracking.

By digitizing healthcare services, the system helps healthcare organizations reduce paperwork, improve communication, enhance patient experience, and efficiently manage healthcare operations through a centralized platform.

Problem Statement

Traditional healthcare consultation and appointment systems mainly depend on manual processes, paper-based records, and disconnected communication systems. Managing appointments, reports, prescriptions, and online consultations manually is time-consuming and error-prone.

The existing system faces several issues such as:

- Manual errors in appointment and patient data management.
- Difficulty in tracking patient records, prescriptions, and diet plans.
- Delays in report upload, download, and management.
- Issues in online meeting handling and communication.
- Lack of centralized healthcare monitoring and real-time updates.
- Time-consuming report management and appointment handling processes.
- Poor meeting minimization and restoration functionality.
- Limited healthcare tracking and communication features.

Due to these limitations, there is a need for a centralized healthcare management system that automates healthcare services while ensuring security, accuracy, transparency, and efficient patient management.

Objectives

1. To digitize the complete healthcare consultation and appointment management process.
2. To automate appointment booking, prescription generation, and diet plan management.
3. To provide real-time dashboard monitoring and healthcare tracking facilities.
4. To support online consultations through Zoom meeting integration.
5. To provide secure report upload, download, and management functionality.
6. To implement role-based access control for Admin, Doctor/Dietician, and User modules.
7. To reduce paperwork, manual errors, and healthcare processing time.
8. To improve healthcare communication, accessibility, transparency, and user experience.

Software Requirements

1. **Operating System:** Windows 11 or Ubuntu Linux
2. **Frontend:** Angular
3. **Backend:** .NET
4. **Database:** Firebase / MySQL
5. **Programming Languages:** JavaScript, TypeScript, Java, SQL
6. **Web Browser:** Google Chrome or Mozilla Firefox
7. **Development Tools:** Eclipse IDE, Visual Studio Code, Postman, GitHub
8. **Testing Tools:** Selenium WebDriver, TestNG, JMeter, JIRA
9. **Payment Integration:** Razorpay
10. **Online Meeting Integration:** Zoom SDK
11. **Server Environment:** Node.js Runtime Environment / .NET Environment
